

How can DNA be used to identify different people, different organisms or different cells...??

Part one:

-practice using micropipettes...

<http://www.sumasinc.com/webcor/animations/content/gelelectrophore.html>

Micropipettes- tool used to dispense small volumes of solutions...

rest stop- starting position

1st stop-push plunger to 1st stop & then insert into liquid, slowly release plunger

2nd stop- used to fully dispense pipette tip contents
